# Sahriar Rahman Nahid

## AI ENGINEER - LLM APPLICATIONS, RAG & AGENT WORKFLOWS

+36 20 918 6775 | srnahid08@gmail.com | linkedin.com/in/sahriar-rahman-nahid | github.com/sahriarnahid | Debrecen, Hungary

### PROFESSIONAL SUMMARY

AI engineer building LLM-powered product systems end to end. Shipped ModelVerse, a live platform that pulls pricing data from several providers on a nightly schedule, normalizes it into versioned snapshots, and generates its own analysis through LLM workflows built with LangChain and LangGraph. Highly proficient in React and TypeScript, with FastAPI on the Python side and AWS for deployment, plus strong Linux and debugging habits. Runs Grey Devs, a development studio where client-facing scoping and delivery are the day job. Currently completing a Computer Science degree at the University of Debrecen (expected 2027).

### CORE COMPETENCIES

LLM Applications | RAG & Vector Search | LangChain & LangGraph | Agent Workflows | Python & FastAPI | React & TypeScript | AWS & Docker | SQL & MongoDB

### WORK EXPERIENCE

#### Programming Club, University of Debrecen

01/2026 - Current

**President**

Debrecen, Hungary

- Lead a programming club of over 300 members, organizing workshops, hackathons and career-development events
- Work with members across very different experience levels, from first-year beginners to competition medalists
- Established and oversee the club's official GitHub organization to host member projects, and built the club website (https://norva.space)

#### International Student Union, University of Debrecen

11/2025 - Current

**Officer of Education**

Debrecen, Hungary

- Manage educational programmes supporting a diverse international student body and collaborate with university staff to promote academic excellence
- Serve as a point of contact for international students, turning recurring friction points into concrete programme improvements

#### CrowdV

08/2024 - 01/2025

**Campus Ambassador**

Dhaka, Bangladesh

- Supported individuals with visual impairment as a transcriber and promoted awareness for people with special needs

#### Grey Devs

06/2023 - Current

**Founder & Lead**

Debrecen, Hungary

- Founded and run a development studio delivering web, mobile, backend and AI-assisted solutions to startups and clients, owning scoping, architecture, delivery, deployment and post-launch support end to end
- Design and build data-driven product systems, including automated ingestion pipelines that normalize multi-source external data into versioned, queryable stores
- Advise clients on scaling backend systems, data models and AI-assisted features, with reliability, cost and maintainability as explicit design constraints

- Led the team as Team Lead in three national and international competitions, advancing to the finals in each and winning outright

### Instant School

03/2020 - 10/2022

**Affiliate Zone Leader**

Dhaka, Bangladesh

- Appointed and managed a team of 9 campus ambassadors, providing mentorship, coordination, and performance oversight, later promoted to Zone Leader

## PROJECTS

### ModelVerse - LLM Pricing & Comparison Platform

Live platform tracking pricing, context limits and use cases across 15 models and 8 coding agents, rendered as an Astro static site from versioned data. Scheduled pipeline aggregates and normalizes live data from three upstream sources into versioned daily snapshots. LLM layer with LangChain and LangGraph: scheduled workflows read the catalogue, call provider APIs, score each record and emit a daily digest, price-change alerts and per-model recommendations. Model comparison views, auto-updating market table and data-driven stack recommender.

Python, LangChain, LangGraph, RAG, FastAPI, Astro, AWS, Docker

### Bachelor Thesis - Robustness of Deep Learning Models Under Adversarial Attacks

Training a CNN and ResNet-18 on CIFAR-10 and measuring how accuracy holds up under standard and adaptive adversarial attacks. Comparing two defence approaches - adversarial training against input preprocessing - and quantifying the accuracy trade-off each one costs. Reproducible PyTorch setup with fixed seeds and documented methodology.

Python, PyTorch, NumPy, Matplotlib

## EDUCATION

**BSc Computer Science** University of Debrecen — Expected 2027

Debrecen, Hungary

Stipendium Hungaricum Scholarship, 2024/25 from Tempus Public Foundation (Government of Hungary).

**High School Diploma** Sylhet Cadet College — 2022

Sylhet, Bangladesh

## AWARDS & HONORS

| | | |
|---|---|---|
| National Award, ICSC | International Computer Science Competition | 2025 |
| Finalist, BCOLBD | Bangladesh Blockchain Olympiad | 2024 |
| Award of Merit, IBCOL Finals | International Blockchain Olympiad | 2023 |
| Best Prototype Award, BCOLBD Finals | Bangladesh Blockchain Olympiad | 2023 |

## SKILLS

**Programming Languages:** Python, Java (working knowledge), C++ (working knowledge), TypeScript, JavaScript (ES6+), SQL (MySQL)

**LLM & Agent Systems:** LangChain, LangGraph, agent workflow design (tool calling, multi-step planning, control loops), RAG with LangChain retrievers, prompt engineering, LLM APIs (OpenAI, Anthropic, Gemini), evaluation & benchmarking with LangSmith

**Machine Learning:** PyTorch, scikit-learn, NumPy, Pandas, CNN training and evaluation

**Data & Storage:** Advanced SQL (MySQL), MongoDB, Redis, ETL pipeline design, data normalization & versioning, web scraping & API integration, exploratory data analysis, data visualization (Matplotlib, Seaborn)

**Web & Backend:** React.js (highly proficient), TypeScript, Node.js, Express.js, FastAPI, RESTful API design & integration, Astro, HTML5 & CSS3

**Cloud, Platform & Tooling:** AWS, Docker, Linux, Git & GitHub, GitHub Actions CI/CD, LangSmith, Streamlit, n8n workflow automation (basic), pytest, JUnit, debugging and code reading, object-oriented programming

**Languages (spoken):** English - Fluent, Hungarian - Basic, Bengali - Native
